EDITH CONKLIN, Owner

JOHNNY WONDER

Q. "WHY MUST A FEVER THERMOMETER BE SHAKEN EACH TIME IT IS USED?"

PAM KERNS, OF BURLINGTON, KY., WINS A PRIZE FOR THIS QUESTION.

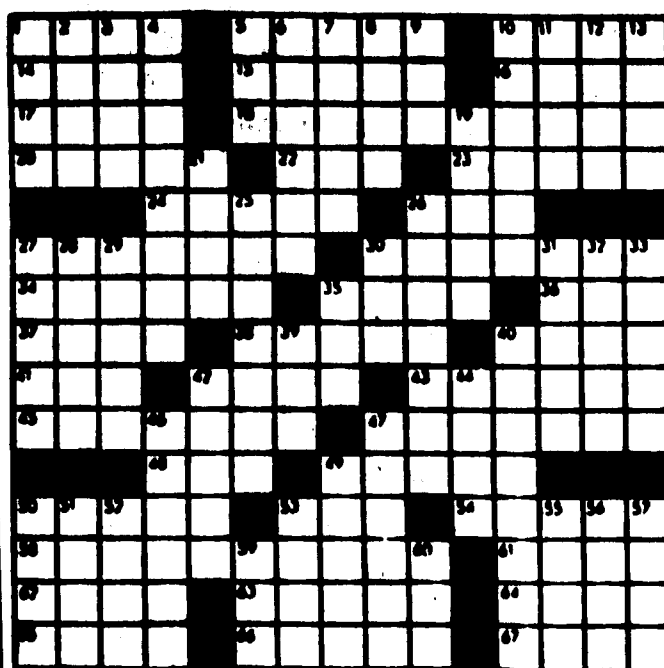

A. A fever thermometer is a special kind of thermometer. It shows whether or not you have a fever when you are sick. It is made of glass with a thin tube inside. A bulb at one end is filled with mercury. When your temperature is taken, the warmth of your mouth makes the mercury expand and rise in the hollow tube. There is a

pinched-in place in the tube to keep the mercury from shrinking back into the bulb as the temperature is read. Because the mercury stays up in the tube, it must always be shaken down before the thermometer is used again.

You can win a World Almanac if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1250, Santa Cruz, CA 95061.
